

NGUYEN Hung Cuong

- Nationality : Vietnamese
- Lives in Hanoi
- Born in 1989
- Job : Student at Hanoi University of Technology

I have been doing Origami since I was 6. Paper folding is a subject in junior school. So I was taught to fold many simple models. In 1997, my mom bought me my first Origami book: "Prehistoric Origami" by John Montroll. The book made me an Origami lover. I tried to seek and fold all the diagrams I could find. But it was very difficult to find books about Origami in Vietnam. When I couldn't find anything new to fold, I began creating my own models. In 2004, I met Hiba and joined the Vietnam Origami Group (VOG). Since then, I met and became friends with many Origami enthusiasts. Among all Origami authors, I admire Robert Lang; his book "Origami Design Secrets" helps me a lot in designing. I consider him as my first origami teacher.

This eagle was upgraded from my old version of 2006. In the first version, I had just focused on the wings, trying to make them large and detailed. So I had used the entire two edges of the square paper for the wings. The wings were inspired by Kamiya Satoshi's phoenix and Robert Lang's dancing crane. I had also created feathers for the tail because I found that many Origami eagles do not have detailed enough tails. For this last version, I have paid attention to other parts of the model. I had added eyes to the head and claws to the feet. Now the model looks quite good and I am happy that people like it.

Eagle

- Creation : NGUYEN Hung Cuong
- Diagram : NGUYEN H. + TERRY N.
- Date : 13/04/2008
- Level : Complex
- Time to fold it : 6 h

Paper : 50 x 50 cm

- ☐ Standard paper
- ☒ Tissue-foil / MC
- ☐ Wet folding
